

Sharjah Media picks IPTV system

Sharjah Media Corporation is relying on IPTV products from Teracue for the development of an IP-based inhouse video network for its broadcast division.

The H.264 encoders and DVB-to-IP gateways from the German manufacturer, which is presenting its products at IBC this week, make it possible to feed all the TV and broadcasting studio signals of Sharjah Media into the company's internal network. The planning and systems integration was handled by Teracue's distribution partner Qvest Media, which is based in Dubai. [14.442](#)
